

**IN THE CLAIMS:**

Please cancel claim 1 as set forth herein:

Claims 1-4 (Canceled).

5. (Previously Presented) A picture adjustment apparatus for a video display appliance for providing diverse picture adjustment functions through a plurality of picture adjustment OSD's, comprising:

a key manipulation section for receiving information on accessible picture adjustment OSDs from a user;

a memory for storing information on the accessible picture adjustment OSDs;

a display section for displaying various kinds of information;

an OSD output processing section for displaying an OSD according to the OSD data on the display section; and

a control section for providing the OSD output processing section with the OSD data for displaying the picture adjustment OSDs after receiving and storing the information on the accessible picture adjustment OSDs, and processing as an effective command only the command for picture adjustment inputted through the picture adjustment OSD that has been determined to be accessible, said control section entering into a menu for determining whether the picture adjustment is accessible if a power source of the video display appliance is turned on with simultaneous input of predetermined two or more keys, determining whether each of the picture adjustment OSDs is

accessible in accordance with the information on selection of the accessible picture adjustment OSDs inputted by the user, and storing the information in the memory.

6. (Original) The apparatus of claim 5, wherein the control section displays the picture adjustment OSDs in respective colors corresponding to the pre-determined accessibility.

7. (Canceled).

8. (Previously Presented) A picture adjustment method for a video display appliance for providing diverse picture adjustment functions through a plurality of picture adjustment OSDs, the method comprising the steps of:

(a) entering a menu for determining an accessibility or inaccessibility of picture adjustment OSDs by turning on a power source of the video display appliance while simultaneously inputting at least two keys in order to enter said menu, and storing information on the accessibility or inaccessibility of each picture adjustment OSD in a memory;

(b) if entry into a picture adjustment process is commanded after the determination of the accessibility or inaccessibility of the picture adjustment OSDs, displaying the picture adjustment OSDs;

(c) if a command for picture adjustment is inputted through any one of the displayed picture adjustment OSDs, checking whether the corresponding picture adjustment OSD is accessible;

(d) performing the picture adjustment in accordance with the inputted command for picture adjustment if the corresponding picture adjustment OSD is accessible; and

(e) ignoring the inputted command for picture adjustment if the corresponding picture adjustment OSD is not accessible.

9. (Previously Presented) A picture adjustment method for a video display appliance for providing diverse picture adjustment functions through a plurality of picture adjustment OSDs, the method comprising the steps of:

turning on a power source of the video display appliance while simultaneously inputting at least two keys;

determining each of the picture adjustment OSDs as being either accessible or inaccessible in accordance with accessibility instructions input by a user;

storing information on the accessibility or inaccessibility of each picture adjustment OSD in a memory;

subsequently receiving a command for entry into a picture adjustment process;

displaying the picture adjustment OSDs;

receiving a command for picture adjustment inputted through any one of the displayed picture adjustment OSDs,

accessing the memory to check whether the corresponding picture adjustment OSD is accessible;

performing the picture adjustment in accordance with the inputted command for picture adjustment if the corresponding picture adjustment OSD is accessible; and

ignoring the inputted command for picture adjustment if the corresponding picture adjustment OSD is not accessible.

10. (Previously Presented) A picture adjustment method for a video display appliance for providing diverse picture adjustment functions through a plurality of picture adjustment OSDs, the method comprising the steps of:

determining each of the picture adjustment OSDs as being either accessible or inaccessible in accordance with accessibility instructions input by a user;

storing information on the accessibility or inaccessibility of each picture adjustment OSD in a memory;

subsequently receiving a command for entry into a picture adjustment process;

displaying the picture adjustment OSDs;

receiving a command for picture adjustment inputted through any one of the displayed picture adjustment OSDs,

accessing the memory to check whether the corresponding picture adjustment OSD is accessible;

performing the picture adjustment in accordance with the inputted command for picture adjustment if the corresponding picture adjustment OSD is accessible;

Serial No.: 09/925,682  
Atty. Docket No.: P67034US0

ignoring the inputted command for picture adjustment if the corresponding picture adjustment OSD is not accessible; and

inputting a command for termination of the determination of the picture adjustment accessibility or inaccessibility such that all picture adjustment OSDs are accessible.

Claim 11 (Canceled).
